

[illegible]

The following table shows the results of the regression analysis. The dependent variable is the number of days of absence from work due to illness. The independent variables are the age, sex, and education of the respondent. The results show that the age of the respondent is positively correlated with the number of days of absence from work due to illness. The sex of the respondent is not correlated with the number of days of absence from work due to illness. The education of the respondent is negatively correlated with the number of days of absence from work due to illness.
